EDMP Readiness Assessment

Enterprise Decision Memory Maturity Assessment

Six dimensions - Maturity scale - Executive output framework

A structured method for evaluating an organization's ability to preserve, reconstruct, govern, and reuse decision formation across human and AI-assisted environments.

June 2026 - Assessment framework document

EXECUTIVE PURPOSE

The EDMP Readiness Assessment evaluates an organization's ability to preserve, reconstruct, govern, and reuse decision formation across human and AI-assisted environments.

The assessment identifies hidden exposure related to:

- Decision traceability
- Institutional memory loss
- Governance accountability
- Organizational rework
- Executive continuity
- AI decision oversight

The objective is not compliance.

The objective is organizational understanding.

DIMENSION 1 Decision Traceability

Assessment Question

To what extent can important organizational decisions be reconstructed after they have been made?

Indicators

- Decision rationale documented
- Alternatives preserved
- Assumptions recorded
- Decision ownership visible
- Evidence linked to decisions

Score

- 1 = Decisions cannot be reconstructed
- 2 = Reconstruction depends on individuals
- 3 = Partial decision records exist
- 4 = Most major decisions are traceable
- 5 = Complete decision lineage available

Executive Risk

Low scores indicate:

- Accountability gaps
- Governance exposure
- High dependency on individual memory

DIMENSION 2 Institutional Memory Risk

Assessment Question

How much organizational knowledge leaves when key individuals leave?

Indicators

- Knowledge transfer quality

- Historical reasoning availability
- Documentation continuity
- Leadership transition resilience

Score

- 1 = Knowledge resides primarily in people
- 2 = Significant knowledge loss occurs
- 3 = Partial continuity exists
- 4 = Most reasoning survives transitions
- 5 = Institutional memory largely independent of individuals

Executive Risk

Low scores indicate:

- Key-person dependency
- Continuity risk
- Repeated organizational learning cycles

DIMENSION 3 AI Governance Exposure

Assessment Question

Can AI-assisted decisions be explained and defended?

Indicators

- Human oversight visibility
- Recommendation traceability
- Accountability ownership
- Escalation pathways
- Governance controls

Score

- 1 = No visibility
- 2 = Limited oversight
- 3 = Partial accountability
- 4 = Strong governance structure
- 5 = Full reasoning lineage and accountability

Executive Risk

Low scores indicate:

- Regulatory exposure
- AI accountability gaps
- Governance uncertainty

DIMENSION 4 Rework Exposure

Assessment Question

How frequently does the organization recreate reasoning that already existed?

Indicators

- Repeated discussions

- Repeated analysis
- Context rebuilding effort
- Decision rediscovery

Score

- 1 = Constant recreation
- 2 = Frequent rediscovery
- 3 = Moderate rework
- 4 = Limited rework
- 5 = Decisions are reusable organizational assets

Executive Risk

Low scores indicate:

- Productivity loss
- Excess meeting load
- Hidden operational cost

DIMENSION 5 Signal-to-Decision Visibility

Assessment Question

Can the organization connect decisions back to their originating signals?

Indicators

- Trigger visibility
- Escalation traceability
- Intervention logic
- Root-cause continuity

Score

- 1 = No signal visibility
- 2 = Fragmented signals
- 3 = Partial linkage
- 4 = Strong visibility
- 5 = Complete signal-to-decision continuity

Executive Risk

Low scores indicate:

- Poor intervention quality
- Strategic drift
- Weak prioritization

DIMENSION 6 Executive Continuity

Assessment Question

Can new leaders rapidly understand historical decision logic?

Indicators

- Executive onboarding speed
- Historical context availability

- Strategic continuity
- Governance continuity

Score

- 1 = New leaders rebuild context manually
- 2 = Significant transition delays
- 3 = Moderate continuity
- 4 = Strong continuity
- 5 = Immediate understanding of historical reasoning

Executive Risk

Low scores indicate:

- Leadership transition friction
- Strategic inconsistency
- Institutional memory loss

OVERALL MATURITY SCALE

Level 1 - Reactive

Score: 6-10

- Decisions are largely undocumented
- Memory resides in individuals
- High governance risk
- Significant rework

Level 2 - Fragmented

Score: 11-17

- Partial records exist
- Reasoning fragmented across systems
- High continuity exposure

Level 3 - Structured

Score: 18-23

- Consistent decision documentation
- Moderate governance visibility
- Some reusable reasoning assets

Level 4 - Governed

Score: 24-28

- Strong traceability
- Executive continuity supported
- AI governance becoming mature

Level 5 - Decision Intelligent

Score: 29-30

- Enterprise Decision Memory established
- Decisions treated as reusable assets
- Full reasoning lineage available
- High accountability and resilience

EXECUTIVE OUTPUT

The final report includes:

Maturity Score	Overall EDMP Readiness Score
Heat Map	Strongest and weakest dimensions
Exposure Analysis	Top continuity, governance, and rework risks
Priority Recommendations	90-Day Intervention Roadmap
Executive Summary	Board-ready interpretation and next actions

Closing Statement

Organizations already measure financial maturity, process maturity, and cybersecurity maturity.

The next frontier is Decision Memory Maturity.

The EDMP Readiness Assessment provides a practical method for understanding where an organization stands today and what it must improve to preserve reasoning, accountability, and institutional continuity in an AI-enabled future.
