EDMP

The Missing Enterprise Memory Layer

Preserving how important decisions are formed, evolved, executed, and remembered.

SPEAKER NOTES — SLIDE 1

EDMP

Most organizations preserve data, workflows, approvals, transactions, and outcomes.

Few preserve how important decisions were formed.

This presentation examines why that gap is becoming increasingly expensive in an AI-enabled world.

The Executive Blind Spot

Organizations can usually answer:

- ✓ What happened?
- ✓ Who approved it?
- ✓ What was implemented?
- ✓ What was the outcome?

Organizations often cannot answer:

- ✗ Why was this decision made?
- ✗ What alternatives were considered?
- ✗ Which assumptions were accepted?
- ✗ Which risks were knowingly tolerated?

SPEAKER NOTES — SLIDE 2

The Executive Blind Spot

The issue is not information.

The issue is reasoning.

Most organizations remember conclusions.

They forget the path that created them.

The Cost of Forgetting

Three years later:

- CFO leaves
- Program manager leaves
- Strategy changes
- AI model changes
- Board changes

The organization still has:

- PowerPoints
- Jira tickets
- Teams chats
- Emails
- SharePoint

Yet cannot reconstruct: **Signal** → **Reasoning** → **Decision** → **Execution** → **Outcome**

SPEAKER NOTES — SLIDE 3

The Cost of Forgetting

Institutional memory breaks long before information disappears.

The organization remembers artifacts.

It forgets understanding.

Why AI Makes This Worse

Before AI:

Human
→ Decision

After AI:

Human
→ AI
→ Human
→ Workflow
→ Approval
→ Decision

Result:

↑ Decision Velocity
↓ Decision Traceability

SPEAKER NOTES — SLIDE 4

Why AI Makes This Worse

AI is not the problem.

AI magnifies an existing problem.

Organizations make more decisions faster while understanding less about how those decisions were formed.

The AI Paradox

- More Intelligence
- More Analysis
- More Recommendations
- More Automation

- Less Understanding
- Less Continuity
- Less Accountability
- Less Traceability

SPEAKER NOTES — SLIDE 5

The AI Paradox

This is the paradox.

The same systems increasing decision speed often reduce reasoning visibility.

EDMP Value Chain

SPEAKER NOTES — SLIDE 6

EDMP Value Chain

EDMP preserves the complete decision journey.

Not merely outcomes.

Reasoning becomes inspectable, reusable, and accountable.

Financial Case #1

Risk Reduction

Can your organization demonstrate:

- Why decisions were made?
- Which evidence existed?
- Which risks were accepted?
- Who accepted accountability?

Applicable to:

- Audit
 - Litigation
 - Regulatory review
 - Procurement disputes
 - AI Governance
-

SPEAKER NOTES — SLIDE 7

Financial Case #1

The financial value is defensibility.

Organizations increasingly need to explain decisions, not merely outcomes.

Financial Case #2

Reduced Rework

- 2024: Decision Made
- 2025: Same Discussion
- 2026: Same Discussion
- 2027: Same Discussion

Question:

How much organizational effort is spent recreating decisions already made?

SPEAKER NOTES — SLIDE 8

Financial Case #2

Organizations repeatedly pay for knowledge they already created.

EDMP turns decisions into reusable assets.

Financial Case #3

Executive Continuity

Without EDMP

Person

- Knowledge
- Departure
- Context Loss

With EDMP

Person

- Knowledge
- Decision Memory
- Institutional Continuity

SPEAKER NOTES — SLIDE 9

Financial Case #3

People leaving should not mean reasoning leaving.

Decision continuity becomes an organizational capability.

Financial Case #4

AI Governance

The future question is not:

"Did a decision occur?"

The future question is:

"Can you explain how it was formed?"

Drivers:

- AI Act
 - Governance frameworks
 - Audit expectations
 - Board accountability
-

Financial Case #4

AI Governance is likely the strongest entry market because it combines risk, accountability, and executive relevance.

Category Creation

CRM = Customer Memory

ERP = Operational Memory

EDMP = Decision Memory

Not another dashboard.
Not another workflow tool.
Not another AI platform.
A new enterprise memory layer.

SPEAKER NOTES — SLIDE 11

Category Creation

Categories emerge when organizations recognize an unmanaged asset.

EDMP positions decision formation as that asset.

Recommended Next Steps

Executive Briefing

EDMP Readiness Assessment

Decision Environment Exploration

Enterprise Decision Memory Strategy

Closing:

Organizations already preserve what happened.

The next competitive advantage belongs to organizations that preserve why it happened.

SPEAKER NOTES — SLIDE 12

Recommended Next Steps

The purpose of EDMP is not software adoption.

The purpose is organizational understanding.

The question is no longer whether decisions are made.

The question is whether they can still be understood years later.
