June 2026 - Confidential facilitator material

FACILITATOR GUIDE

Duration: 90 Minutes

Audience

- Board Members
- Executive Leadership Teams
- CIO, CFO, COO, CRO
- Governance Leaders
- Enterprise Architects
- Transformation Sponsors

Objective

Help executives understand:

- The Decision Memory problem
- The cost of forgetting
- The AI accountability paradox
- The EDMP category
- Their own organizational exposure
- Potential next steps

The session is educational.

Not a software demonstration.

Not a sales presentation.

SESSION STRUCTURE

PART 1 Executive Context

10 Minutes

Purpose

Establish the problem.

Opening Question

How confident are you that your organization could reconstruct the reasoning behind a major strategic decision made three years ago?

Follow-up

Not the outcome.

The reasoning.

Discussion Points

- Leadership transitions
- Organizational memory
- Governance visibility
- AI acceleration

Success Criteria: The audience recognizes the distinction between outcomes and reasoning.

PART 2 The Cost Of Forgetting

15 Minutes

Present

- Executive Blind Spot
- Cost of Forgetting
- Rework Economics

Facilitator Questions

1. Which decisions are repeatedly revisited?
2. Where does organizational context disappear?
3. What knowledge leaves when people leave?
4. Which discussions seem to repeat every few years?

Capture responses. Do not challenge answers. Observe patterns.

Success Criteria: Audience begins identifying existing symptoms.

PART 3 The AI Accountability Paradox

15 Minutes

Present

- AI decision chains
- Explainability pressure
- Governance implications

Core Message

AI increases:

- speed
- scale
- complexity

It does not automatically increase:

- accountability
- continuity
- traceability

Discussion Questions

1. Where is AI influencing decisions today?
2. Who remains accountable?
3. Could you explain those decisions to an auditor?
4. Could you explain them to a regulator?

Success Criteria: Audience recognizes governance implications.

PART 4 EDMP Explained

15 Minutes

Present

Signal

Structure

v

Decision

Execution Trace

Institutional Memory

Facilitator Notes

Avoid software discussions.

Focus on:

- decision continuity
- organizational memory
- governance
- accountability

Discussion Questions

1. Which stage is weakest today?
2. Which stage creates the most risk?
3. Which stage consumes the most effort?

Success Criteria: Audience maps EDMP to their own environment.

PART 5 Decision Environment Discussion

20 Minutes

Select relevant domains

- Finance
- Governance
- Legal
- Procurement
- Talent
- Commercial

Facilitator Questions

Finance How are major investment decisions preserved today?

Governance Can policy exceptions be reconstructed?

Procurement Can vendor selections be defended years later?

Talent Can hiring rationale be reconstructed?

Commercial Can strategic market decisions be explained?

Capture examples. These become assessment opportunities.

Success Criteria: Audience begins applying EDMP to real situations.

PART 6 Executive Reflection

10 Minutes

Ask

1. What surprised you most?
2. Where do you see exposure?
3. What would happen if key leaders left tomorrow?

4. Which decisions would be hardest to explain?
5. What would stronger decision memory enable?

Do not pitch. Allow reflection.

Success Criteria: Audience articulates value themselves.

CLOSING

Duration: 5 Minutes

Closing Statement

Organizations already preserve:

- data
- workflows
- approvals
- transactions

The next enterprise capability may be preserving:

reasoning.

The question is not:

"Can your organization make decisions?"

The question is:

"Can it still understand them years later?"

POSSIBLE NEXT STEPS

Option 1 - Executive Briefing Pack

For internal board discussion.

Option 2 - EDMP Readiness Assessment

To establish current maturity and exposure.

Option 3 - Decision Environment Workshop

Focused exploration of one domain (AI Governance, Finance, Procurement, Legal).

FACILITATOR RULES

Never sell software.

Never discuss platform features first.

Never start with technology.

Always begin with: decisions, continuity, accountability, memory.

Technology is introduced only after the problem is understood.

The briefing succeeds when executives say: "We have this problem."

Not when they say: "Interesting software."
